Fixed Income Market Summary for the Second Quarter of 2008

As at May 2008 the inflation rate measured 10.0 per cent, exactly the same level as at the start of the year and an increase of 0.6 percent over the first quarter of 2008. Food price inflation continued to have the largest influence on headline inflation over this period ending at 21.8 per cent on a year on year basis. This rate was due mainly to world wide pricing pressures on wheat and cereals and continued but slowed price increases for fish, milk, cheese and eggs.

The frequency of OMO issuances by the Central Bank was drastically reduced during May and June as the Central Bank reached its maximum allowable limit for OMO and T-bill issuances. Interest rates on these securities remained flat over the first quarter at 7.75 per cent on 6-month issues and 7.95 per cent on 1-year issues while the Central Bank maintained its Repo rate at 8.25 per cent.

The Central Bank has issued an 8.25 per cent, 9-year bond which was settled on July 2, 2008 and was aimed at removing the excess liquidity generated from the

amalgamation of RBTT and RBC. The maximum issue size was TT\$1.2 billion which was fully utilized, causing the Central Bank to apportion the bond to bidders.

Finally, the bond trading platform (launched in January this year) continued to show no activity beyond the trades which occurred in the first quarter. It is expected that the most recently issued bond (for 9 years at 8.25 per cent) would help to spur activity in this market in the coming quarter
